SAND BED

The healing properties of hot sand were already known in Antiquity: when it is hot, it activates the flow of blood and lymph, encourages sweating, aids weight loss, stimulates oxidation processes and enhances kidney function, removes facial swelling and improves metabolism. Psamotherapy (hot sand therapy) helps treat traumatic disorders of the musculoskeletal system, as well as poorly flexing joints and the peripheral nervous system.

All facial and body treatments in the menu could be performed on the sand bed. Our therapists will advise the most suitable treatment to match your expectations.
